

## Fraction Strips - How To Video Script

### Moving, Copying, Deleting and Aligning Fraction Representations

Related Screen Picture	Script
<p><b>Creating Fraction Representations</b></p>  <p>Represent another fraction or work with the existing representations.</p>	<p>A fraction representation in the workspace can have 1 or more parts ...</p> <p>... and the parts can be the same or different.</p>
<p><b>Selecting</b></p>  <p>Represent another fraction or work with the existing representations.</p>	<p>Click on any part in a representation to select that part.</p> <p>You can select the entire representation by clicking just below it.</p> <p>Click, hold then drag to quickly select one or more representations ...</p> <p>... then deselect by clicking in a white space.</p>
<p><b>Moving a Part</b></p>  <p>Represent another fraction or work with the existing representations.</p>	<p>When a part is selected you can move, copy or delete it. Let's try that.</p> <p>Move this part to a different location in the SAME representation, ...</p> <p>... a DIFFERENT representation, ...</p> <p>... the workspace, or the recycle bin.</p>

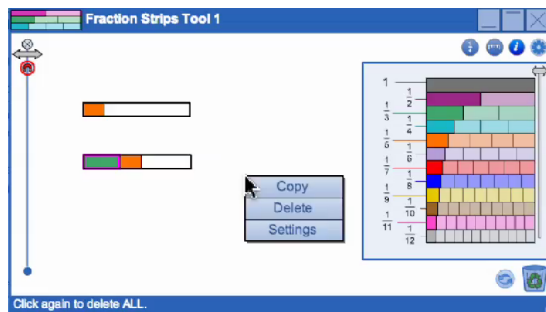

## Moving More Than One Part

You can do the same actions with more more than one part.

Move the selection to a different representation, the workspace, or the recycle bin

## Deleting

Now let's talk about two more ways to delete.

Select then press the delete key on your keyboard ... or

Select then click and hold in a white space to make this mini menu appear ...

... then you could choose Delete, ... but let's move on to copying.

## Copying

Click Copy.

The copied part appeared at the end of the representation.

When you want more than one copy of a single part, it's faster to use this copy button which appears when the cursor is over a part.

To copy an entire representation, select the representation then click and hold anywhere in the white space to make the mini menu appear.

Click copy.

The copy can be dragged to any location in the workspace.

## Alignment Bar

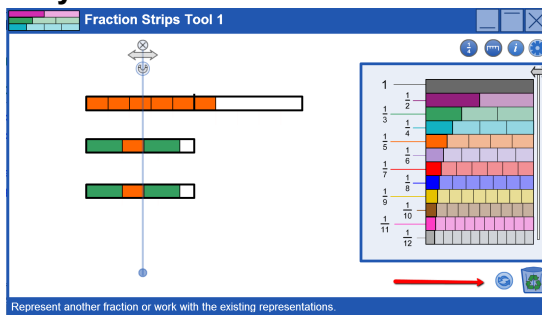

The last thing to show you in this video is the alignment bar on the left side of the workspace.

Watch what happens as the double-headed arrow is dragged.

You can turn off the magnet so that only the bar moves, you can shorten the bar, hide it.

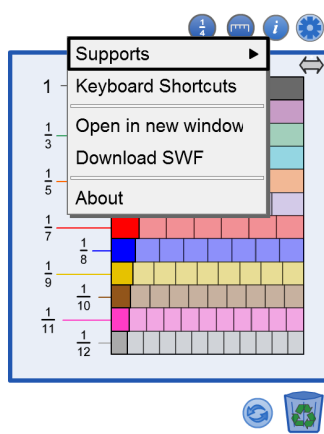

[Click here to make the alignment bar reappear.](#)

## Recycle Bin & Reset

When nothing is selected in the work space, click the recycle bin to delete all. Click the reset button to return the tool to its starting state.

## Information Button

The i button is always available for more information and supports.
