

How To Use the Rekenrek - Script

Exploring the Basic Functionality

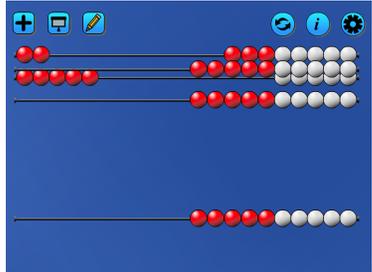

Related Screen Picture	Script
<p data-bbox="205 370 499 399">What is a Rekenrek?</p> 	<p data-bbox="779 407 1793 508">Rekenreks are arithmetic racks. They commonly have two rods of beads. Each rod has ten beads, five of one colour followed by five of another colour.</p>
<p data-bbox="205 735 537 764">Representing Numbers</p> 	<p data-bbox="779 773 1818 878">Numbers are represented by sliding beads to the left. Beads can be moved one at a time, in this case to represent one and then two. or in groups so we now see a representation of 7</p>
<p data-bbox="205 1101 611 1130">Change the Number of Rods</p> 	<p data-bbox="779 1138 1430 1167">Use the plus icon to increase the number of rods.</p>

Reposition the Rods

Drag the rod to a new position.

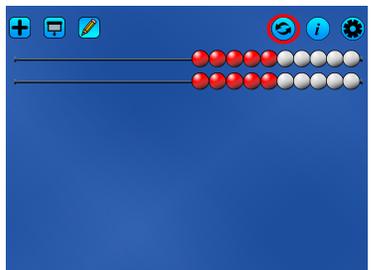

Overlapping Rods

Rods can overlap.

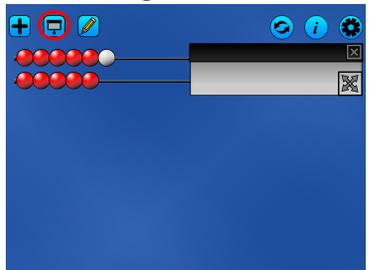

This might help us to compare the values represented on each rod.

Reset Button

The reset button will return the tool to its starting state.

Shade - right side

Let's show a new value on the rekenrek. For example, to represent the number 11 we can show a double plus one.

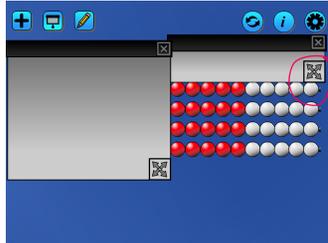

This button will open a shade that covers the right half of the rekenrek beads. This can help us to focus on selected beads.

Shade - left side

Press the icon again to open a second shade that covers the left half of the rekenreks

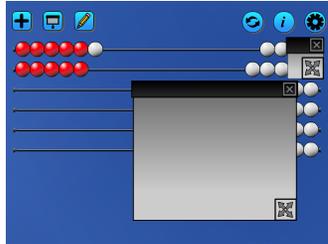

Resize the Shade

Let's add some more rows.

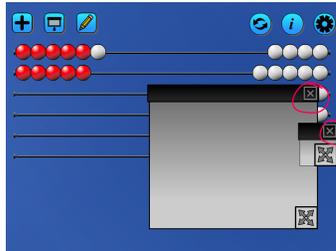

Use the resizer widget to adjust the size of the shade.

Reposition the Shade

Drag the shade to a new location when required.

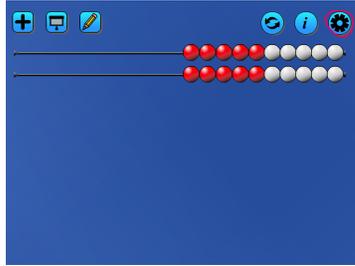

Overlap Shades

The shades can also overlap.

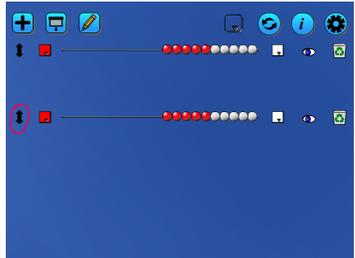

Close the shades to see all the beads and wires.

Settings

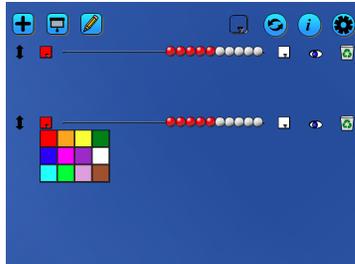

Press the settings button to customize the tool and change various settings.

Reposition Rods

Use the black arrows to reposition the rods.

Change Bead Colour

It is possible to change the colours of the beads on a rod.

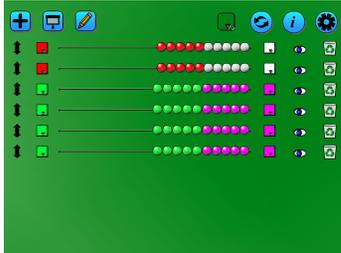

Change the colour of the first five beads using this colour picker and change the colour of the last five beads using the colour picker on the right.

More Rows

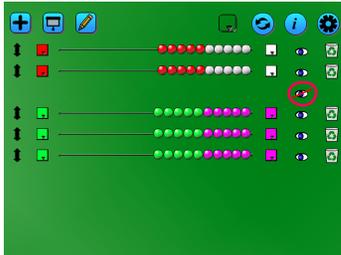

New rods will be added using the same colours as the most recently created rod.

Background Colour

Change the background colour using the colour picker at the top.

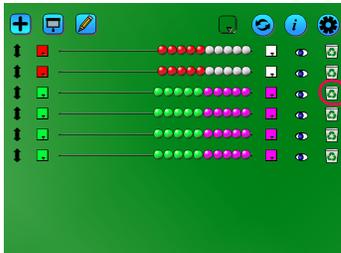

Hide a Row

Use the eye icon to temporarily hide a row.

In settings mode the eye remains visible as a reminder that a rod is hidden.

Delete a Row

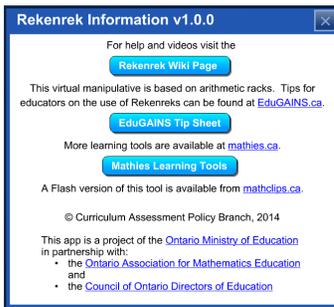

Click the eye again to make the rod reappear.

Use the recycling bin to permanently remove a row.

You can remain in settings mode in order to have immediate access to the various functions or press the settings icon to return to the less cluttered work space.

Information Button

Click *i* to find additional information about using a rekenrek as well as other mathematics learning tools.
